KENDRICK KEE

+6597296685 | kennyhu831@gmail.com | Singapore | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Software Engineer with 6+ years building high-throughput, partner-facing systems in financial markets and large-scale consumer platforms. Deep Golang and REST API expertise, currently at Apple building Go microservices behind on-device personalization shipping across the global iOS install base. Extensive trading-domain background: built equities/commodities pricing engines at Citibank supporting $2B+ daily volume, with full-stack delivery experience spanning Angular frontends, RESTful service design, and Docker/Kubernetes deployment.

TECHNICAL SKILLS

Languages: Go, Java (8/11/17), Scala, Python, JavaScript, SQL
Backend & APIs: Go microservices, REST API design, gRPC, Spring Boot, JPA/Hibernate, event-driven architecture
Frontend: Angular, JavaScript, HTML/CSS | **Databases:** SQL/relational (Oracle, MSSQL, IBM Db2), Cassandra, MongoDB
Cloud & DevOps: Docker, Kubernetes, CI/CD (Jenkins, TeamCity), Git, Splunk, Grafana | **Messaging:** Kafka, RabbitMQ
Data: Apache Spark (Scala/PySpark), batch & streaming ETL, feature pipelines, two-tower retrieval
Domain: Equities & commodities trading, pricing engines, market data, recommendation systems

PROFESSIONAL EXPERIENCE

Apple Inc via TEKsystems — Singapore

Software Engineer — May 2026 - Present

- Own the Go serving tier for a recommendations platform supporting payments- and commerce-adjacent surfaces, designing REST/gRPC service APIs and Cassandra-backed retrieval under strict latency budgets.
- Ship on-device personalization across the global iOS install base, pushing ranking logic to the client under privacy constraints that keep user data on-device, at inference footprints orders of magnitude smaller than server-side.
- Operate a dual-hat backend/data role, additionally owning Scala/Spark batch and streaming pipelines that convert raw interaction events into production features and embeddings for a two-tower retrieval model.
- Drive architectural decisions end-to-end with cross-functional ML and product partners, from data model design through service rollout and online A/B validation.

Citibank Singapore Limited via LTIMindtree — Singapore

Software Engineer — Oct 2024 - Apr 2026

- Architected REST-based pricing calculation microservice for equities/commodities trading, processing 100K+ daily transactions at sub-200ms latency using Java Spring Boot and Oracle (supporting $2B+ daily volume).
- Built real-time trade monitoring dashboards consumed by trading desks; migrated 20+ MongoDB collections to Oracle RDBMS and optimized queries by 40%, cutting dashboard load times from 8s to 4.8s.
- Delivered high-availability architecture for 24/7 trading operations using distributed caching (Redis) and hybrid relational/NoSQL persistence patterns.
- Built CI/CD pipeline (TeamCity, uDeploy) automating deployment and regression testing, reducing release cycle from 2 weeks to 3 days; Splunk instrumentation enabled 60% faster incident resolution.

ComBuilder Pte Ltd — Singapore

Java Software Developer — Jul 2023 - Oct 2024

- Designed enterprise integration bus supporting multi-protocol external partner integration (REST, SOAP, JMS), enabling event-driven cross-system synchronization.
- Architected 4+ Spring Boot microservices achieving 200% performance improvement via algorithm optimization and query tuning (IBM Db2, MongoDB); raised uptime from 97% to 99.8%.
- Led and mentored 3-person team delivering 4 production modules on schedule; established JUnit/Mockito testing at 85%+ coverage, reducing production bugs by 40%.

Avensys Pte Ltd — Singapore

Software Developer — Apr 2022 - Jun 2023

- Delivered user-facing features end-to-end across the full stack: Angular frontends backed by Java Spring Boot REST APIs and relational persistence, for public-facing government service portals.
- Integrated microservices with external partner systems via REST/SOAP; optimized SQL queries and indexing, reducing report generation time by 50%.

EDUCATION

Georgia Institute of Technology — May 2025
Master of Science in Computer Science | CGPA: 3.83/4.0

University of Wollongong, Australia — Oct 2023
Bachelor of Science in Computer Science with Distinction | WAM: 79/100
